SUMMARY

Final-year B.Tech Information Technology student with strong Python expertise in backend development, REST API engineering, and AI integration. Experienced in building production-grade applications using Django REST Framework and FastAPI, with hands-on work in LangChain, multi-agent AI systems, LLM pipelines, and Generative AI APIs (Google Gemini, OpenAI). Seeking Python backend or AI/GenAI engineering roles where I can apply full-stack development and autonomous agent architecture skills.

TECHNICAL SKILLS

- Core Language:** Python (Primary) — Django REST Framework, FastAPI, LangChain, Celery
- AI and LLMs:** Google Gemini API, Hugging Face Transformers, OpenAI API, LangGraph, ElevenLabs TTS
- Auth and API:** JWT (SimpleJWT), RBAC, REST API Design, ViewSets, Serializers, Pagination, Filtering, Throttling
- Databases:** PostgreSQL, MySQL, SQLite, Redis
- Frontend:** React.js, HTML, CSS, Bootstrap
- Dev Tools:** Git, GitHub, Docker, Postman, Vercel, Linux
- AI Dev Tools:** OpenAI Codex, Google Stitch, Cursor
- Other Languages:** JavaScript, Java, C, C++

WORK EXPERIENCE

Python Developer Intern Country Edu — Remote	Feb 2026 – Present
- Developing EventFlow, a full-stack event discovery and booking platform, as the primary backend engineer using Python, Django REST Framework, and PostgreSQL. - Engineered JWT authentication with RBAC across 3 user roles (Admin, Organiser, Attendee), securing all API endpoints across the platform. - Delivered 5+ production REST APIs covering events, venues, and bookings; enforced pagination and throttling to maintain response times under 200ms during testing. - Built and deployed the React frontend (AI-assisted) with live production deployment on Vercel: eventflow-olive-three.vercel.app. - Collaborated in an agile environment to ship features iteratively, ensuring API reliability, security, and scalability for real-world usage.	

PROJECTS

LocalWeb AI — Autonomous Multi-Agent AI SaaS Platform Python, FastAPI, LangChain, PostgreSQL, Redis, Celery, Docker, Twilio, Stripe GitHub	2026
- Architected an 11-agent autonomous LangGraph pipeline — defining agent roles, tool use, context passing, and failure handling across Discovery, Calling, Negotiation, Payment, Builder, QA, SEO, and CRM agents. - Designed a full autonomous SaaS system using FastAPI and Celery where AI agents discover local businesses, pitch via voice and WhatsApp, generate websites, and collect payments.	
EventFlow — Full-Stack Event Discovery and Booking Platform Python, Django REST Framework, PostgreSQL, React.js, JWT, Vercel GitHub Live	2026
- Built and deployed a production-grade event booking platform with a Django REST Framework backend, PostgreSQL database, and React.js frontend. - Engineered REST APIs for event management, venue listings, and booking workflows; implemented JWT auth, RBAC across 3 roles, pagination, and filtering, handling 100+ API test cases in Postman.	
Django REST IMDb API Clone Python, Django REST Framework, PostgreSQL, SimpleJWT GitHub	2025
Built a scalable IMDb-style REST API with 15+ endpoints covering Movies, Platforms, and Reviews CRUD; implemented JWT authentication, Admin/User/Reviewer RBAC, custom permissions, pagination, filtering, and nested serializers.	
Solar Rooftop Analyzer Python, Streamlit, Google Gemini Vision API GitHub Live	2025

- Built a Streamlit application using Gemini Vision API to analyse satellite images and output solar ROI estimates, energy yield projections, CO2 savings, and panel layout simulations.

EDUCATION

B.Tech in Information Technology	2022 – 2026 (Expected)
SR Institute of Management and Technology, Lucknow (AKTU)	
Intermediate (12th) — CBSE	2021
SR Global School, Lucknow	
High School (10th) — CBSE	2019
Elpis Global School, Biswan
